1. Hybrid joystick head for photo and video use: comfortable, natural grip to easily position your camera.

2. Ball Head: unlimited positioning to achieve any angle.

3. Thumb lock button: to lock push down on the lever with your thumb, release by pulling up with your index finger.

4. Photo/Video selector button: when shooting stills, choose the 'photo' symbol and enjoy the freedom to move the head on any axis. For video simply turn the dial to the 'video' symbol, and use the grip bar as a pan-handle for tilt and pan movements.

5. Small Dovetail Quick release plate: ultra compact quick release plate to match the same small size of your digital camera. For video use, the plate comes equipped with an anti-twist alignment pin.

6. 3 leg angles-selector: turn the dial to select normal leg angles (25°), medium leg angles (45°) or low-angles (80°) to achieve ground level shots.

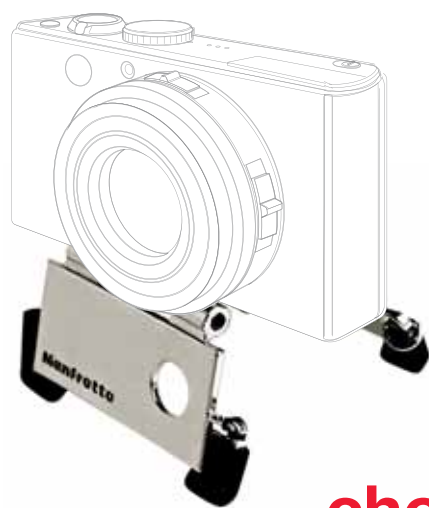

7. 2 section split column: the column unscrews and splits into 2 sections. In combination with the low angle leg setting you can get your camera all the way to the ground.

8. 5-section telescopic legs: to allow the Modo to fold up to its compact size, yet reach great heights when fully extended.

9. Rubber feet: non-slip rubber feet offer protection on delicate floors and surfaces while maintaining a secure grip.
